Blood chemistry, Fatty acids, *Metabolism.

In 14 diabetics the behavior was studied of the blood fats
following treatment with tolbutamide. The lipid frac-
tions profoundly altered by the disease, tend to become
distinctly normalized provided that the diabetic picture
responds favorably to therapy. In particular, it was
noted that an increase in the phosphatides occurred,
along with a reduction of the total lipids, elevated gly-
cerides, and especially of fraction A of the steroids
